

Liquefied Petroleum Gas (LPG)

Floating Ball Valves

Liquefied Petroleum Gas (LPG) is mainly a mixture of hydrocarbon as propane (C_3H_8) and butane (C_4H_{10}) with high energy density. It is obtained by cooling the petroleum gas to $-42\text{ }^{\circ}\text{C}$ reducing its volume approximately by 250 times. This operation is extremely important to enhance the storage and transportation efficiency.

LPG service comes with some challenges as low temperatures, rapid expansion and fugitive emissions potentially harmful to the end-users.

Vinco ball valves are designed to operate in LPG service with high levels of tightness, upstream relief system and fugitive emissions resistance to ensure high levels of safety.

BILL OF MATERIALS					
ENCLOSURE	BALL	STEM	SEATS	SEALS	PACKING
STAINLESS STEEL	STAINLESS STEEL	STAINLESS STEEL	C-RPTFE	C-RPTFE GRAPHITE	FKM GRAPHITE

FEATURES		
Self-adjust live loaded packing ISO 5211 adapter Double encapsulated body seals	Upstream relief hole Unidirectional	Firesafe certified Fugitive emissions design Anti-static ATEX design

INDUSTRIAL RANGE
